

# Diameters (DBH) in centimeters for pines in Block E of NATL's Upland Pine Ecosystem

This block was formerly known as sRAPE (south Restricted Area Pine east).

**Grid blocks:** Each 50x50m grid block is defined by a grid stake at each corner and is named after the stake in its NW corner. On this map each grid block is divided into a NW, NE, SE and SW 25x25m "quarter grid block." The grid stakes are at permanently surveyed points. The other three corners of each ¼ grid block may be marked with temporary stakes that were located by measuring from the surveyed points.

**Online data:** Each surveyed pine tree in NATL has a unique "P-" number. For the P-number map that matches this map and additional data, go to <http://natl.ifas.ufl.edu/maps/pinmaps/php#upmaps>.
