

NATL Grid Map

50-Meter Grid

Locations in NATL can be specified by reference to a grid system based on north-south gridlines (A-O) and east-west gridlines (1-12). Gridlines are at 50-m intervals. Each gridline intersection ("grid point") is identified by its two gridlines (e.g., E5). Each 50x50-m block formed by the gridlines is identified by the grid point in its northwest corner (e.g., block G9 is north of Gasline Trail and west of the Surge Area).

Public and Restricted Areas

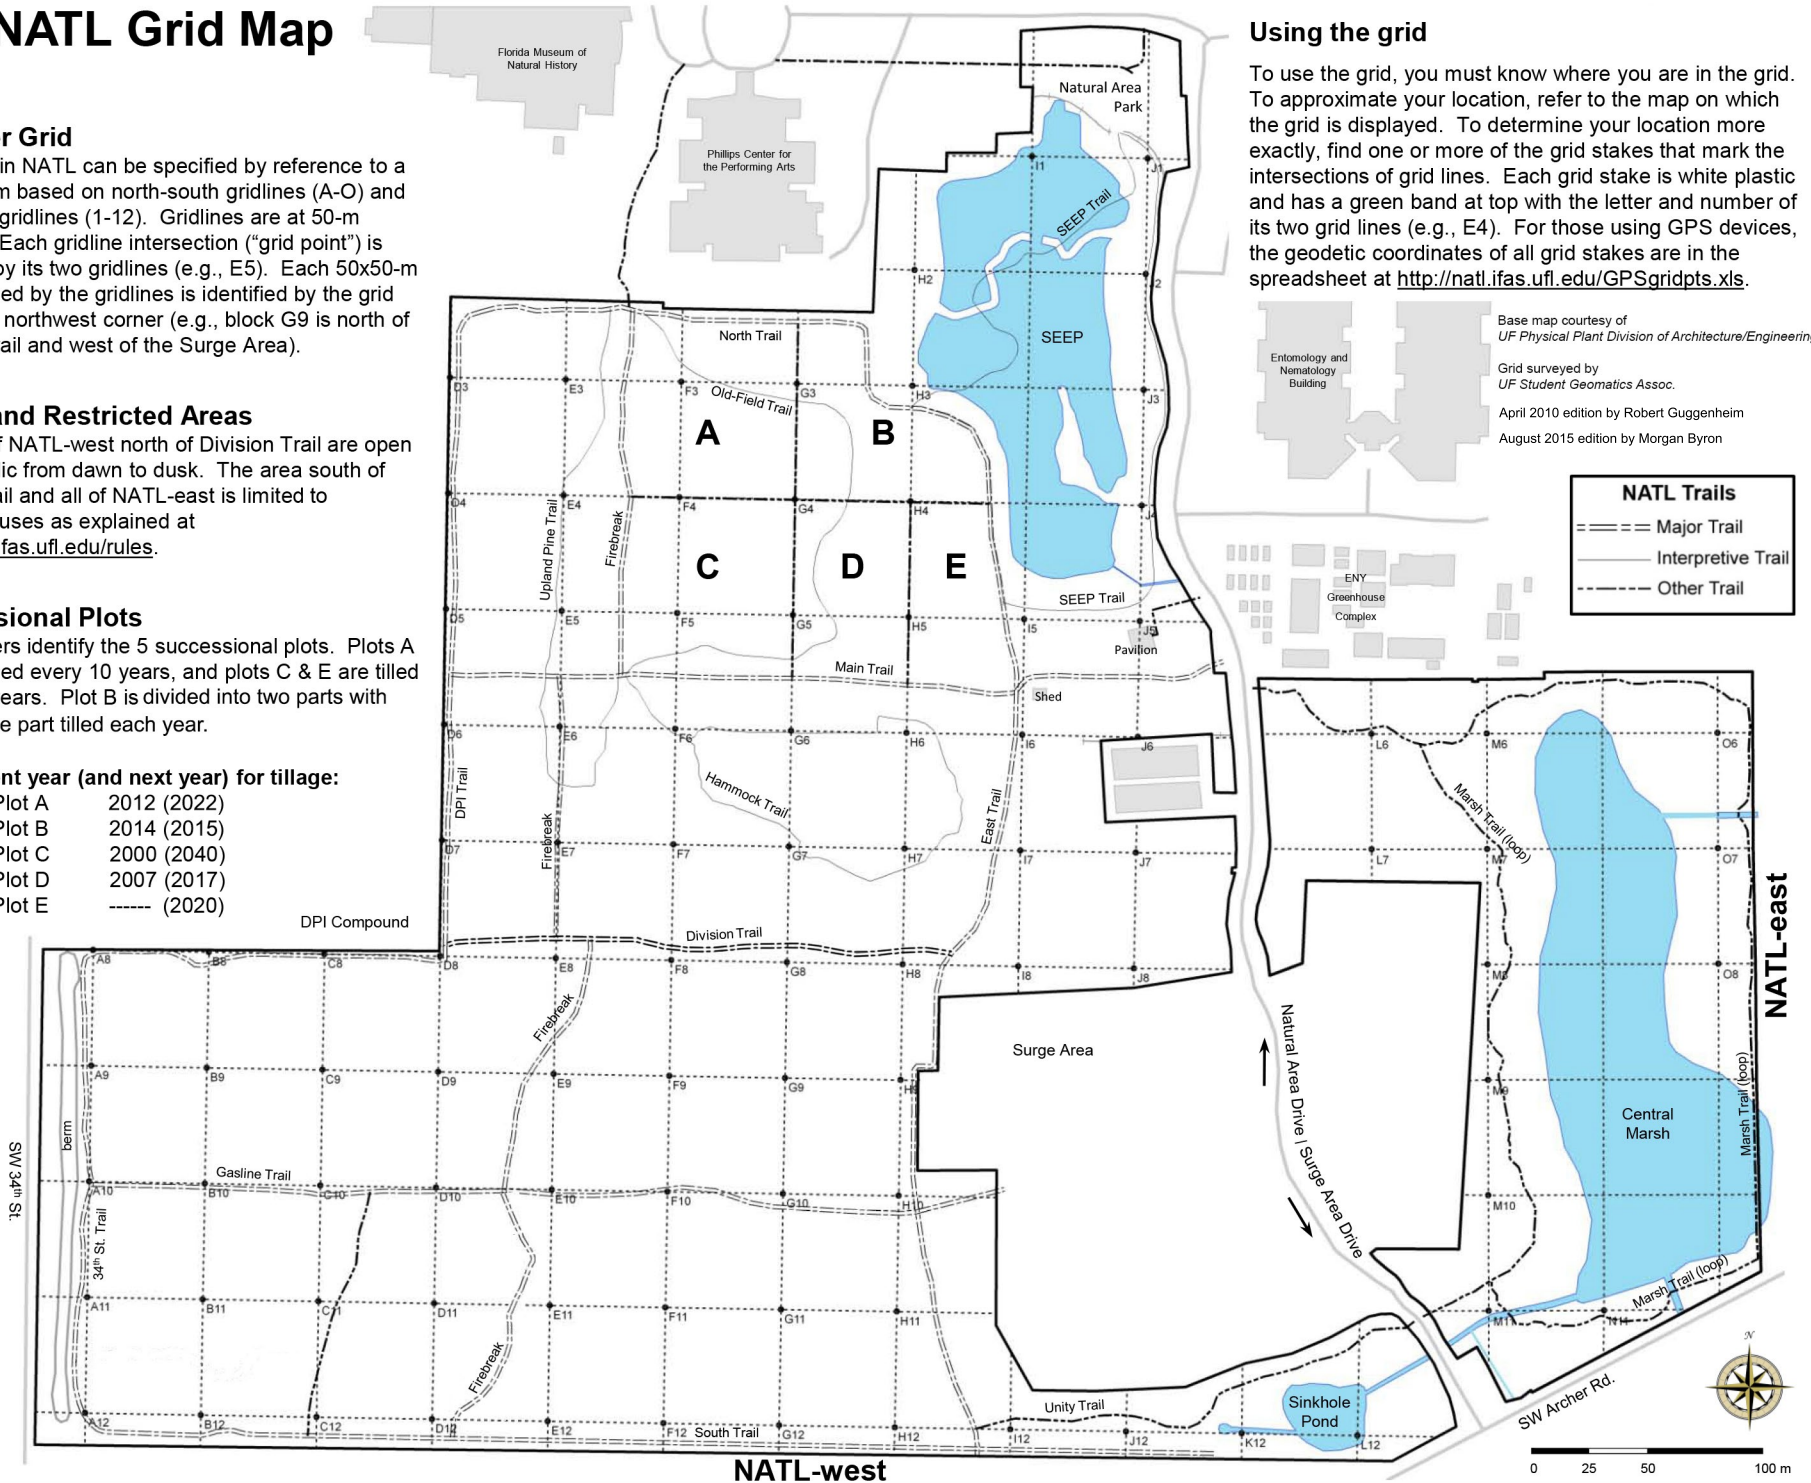

All parts of NATL-west north of Division Trail are open to the public from dawn to dusk. The area south of division trail and all of NATL-east is limited to academic uses as explained at <http://natl.ifas.ufl.edu/rules>.

Successional Plots

Large letters identify the 5 successional plots. Plots A & D are tilled every 10 years, and plots C & E are tilled every 40 years. Plot B is divided into two parts with at least one part tilled each year.

Most recent year (and next year) for tillage:

Plot A	2012 (2022)
Plot B	2014 (2015)
Plot C	2000 (2040)
Plot D	2007 (2017)
Plot E	----- (2020)

Using the grid

To use the grid, you must know where you are in the grid. To approximate your location, refer to the map on which the grid is displayed. To determine your location more exactly, find one or more of the grid stakes that mark the intersections of grid lines. Each grid stake is white plastic and has a green band at top with the letter and number of its two grid lines (e.g., E4). For those using GPS devices, the geodetic coordinates of all grid stakes are in the spreadsheet at <http://natl.ifas.ufl.edu/GPSgridpts.xls>.
